Lab 11 — Create a Candidate Screener Gem and Use It in Sheets

Maps to	LO3: create a custom Gem with instructions and knowledge files, use it from the Gemini side panel in Sheets to screen candidates consistently, and check its output for accuracy and fairness
Duration	30 minutes
Tools	Gemini app (gemini.google.com) · Gems · Google Drive · Google Sheets Gemini side panel (Gems) · OrchidBay_Finalists.xlsx
Mock data	data/OrchidBay_Finalists.xlsx, data/gem-knowledge/OrchidBay_Job_Descriptions.docx, data/gem-knowledge/OrchidBay_Screening_Rubric.docx
Lab files	gem-instructions.txt (the Gem instructions to paste)
Course	Gemini for Google Sheet (C817) · v2.0
Prompts	https://tertiarycourses.github.io/C817-Gemini-for-Google-Sheet/prompts/#lab-11

Goal

Build a reusable Candidate Screener Gem that scores finalists against Orchid Bay's rubric the same way every time - and check it against the data.

What You Will Do

Screening 16 finalists by hand takes the recruiters a day, and every recruiter scores a little differently. You will create a Gem - a custom Gemini with saved instructions - in the Gemini app. Its instructions follow the Persona, Task, Context and Format pattern; its knowledge is the job descriptions and the screening rubric from Google Drive. You will test it on one candidate, open it from the Gems list in the Sheets side panel, screen all four roles, insert the results, check them against the data and record the human decision.

What You Will Build

An 'Orchid Bay Candidate Screener' Gem with instructions and two knowledge files, and OrchidBay_Finalists with a Gem_Screening tab, checks and a Hiring_Manager_Decision dropdown

Prerequisites

- Gems available on your account (gemini.google.com > Gems). Gems are not available in every language.
- This lab folder downloaded: data/OrchidBay_Finalists.xlsx, the two .docx files in data/gem-knowledge/ and gem-instructions.txt.

Data note

Use only the supplied fictional Orchid Bay data or information you are authorised to process. Do not paste credentials, confidential business material or real candidates' or employees' personal data into Gemini, the AI function or a Gem unless your organisation has approved it.

Steps

Step 1. Upload OrchidBay_Finalists.xlsx and the two .docx files in data/gem-knowledge/ to Google Drive. Open the workbook and choose File > Save as Google Sheets. Open each .docx and choose File > Save as Google Docs, so the Gem can read them as Docs.

PROMPT / CHECK — copy and adapt

```
Required state:
Drive : OrchidBay_Finalists (Sheets) | OrchidBay_Job_Descriptions (Docs) |
OrchidBay_Screening_Rubric (Docs)
Finalists : 16 rows - four each for Data Analyst, Software Engineer, Customer Success
Executive, Finance Associate
```

Step 2. In a new browser tab go to gemini.google.com > Gems (in the left menu, or Explore Gems) > New Gem. Name it Orchid Bay Candidate Screener. Paste the instructions below (also in gem-instructions.txt) into Instructions. Under Knowledge, click Add files and choose the two Google Docs from Drive.

PROMPT / CHECK — copy and adapt

```
GEMINI APP:
PERSONA
You are the Orchid Bay Candidate Screener, a careful and fair recruitment analyst at Orchid
Bay Talent Partners, a Singapore recruitment and HR firm.

TASK
Screen candidates for a role against the job description and the screening rubric in your
knowledge files, and recommend Advance, Hold or Decline for each one.

CONTEXT
- Use only two sources: the candidate's row (Years_Experience, Key_Skills, Expected_Salary,
Budget_Max, Notice_Weeks, Final_Interview_Score, Candidate_Summary) and the job description
for the candidate's Position.
- Score each rubric criterion from 0 to 4 exactly as the rubric defines it, then add them up
to a total out of 20.
- A must-have skill counts only if it appears in Key_Skills or Candidate_Summary.
- Never use or guess age, gender, race, religion, nationality, marital status or health. Do
not treat a name or a school as evidence of ability.
- If information is missing, say "not enough information". Do not guess.
- Your recommendation supports the hiring manager. A person makes the hiring decision.

FORMAT
Return one table with these columns: Candidate_ID, Position, Must-have gaps, Skills,
Experience, Interview, Salary fit, Availability, Total /20, Recommendation, Reason (one line,
evidence only).
After the table, list any candidate where you were unsure and why.
```

Step 3. Test the Gem in the preview panel on the right before saving. Paste this one candidate. A correct answer finds the missing must-have skill (Tableau) and scores 12/20 - Skills 2, Experience 3, Interview 1, Salary 4, Availability 2 - so it recommends Hold. If it is wrong, improve the instructions and test again. Then click Save.

PROMPT / CHECK — copy and adapt

```
GEMINI APP:
Screen this candidate for the Data Analyst role:
CAN-26693 | Data Analyst | 4 years | Key_Skills: Excel; Google Workspace; SQL; Stakeholder
Management | Expected_Salary S$4,700 | Budget_Max S$6,500 | Notice_Weeks 8 |
Final_Interview_Score 3.2
```

Step 4. Go back to OrchidBay_Finalists in Sheets. Open the Gemini side panel, click Gems and choose Orchid Bay Candidate Screener (reload the sheet if it isn't listed yet). Screen the first role and click Insert, putting the table on a new tab named Gem_Screening.

PROMPT / CHECK — copy and adapt

```
GEM:
Screen the four Data Analyst finalists on the Finalists tab using the rubric. Identify
candidates by Candidate_ID only and ignore Full_Name. Return the table in your standard
format.
```

Step 5. Screen the other three roles. Insert adds each table on a new tab - keep them, or use Copy and paste each one onto Gem_Screening below the Data Analyst table, leaving a blank row between tables.

PROMPT / CHECK — copy and adapt

```
GEM:
Now screen the Software Engineer, Customer Success Executive and Finance Associate finalists
in the same format.
```

Step 6. Check the Gem against the data. Must-have gaps should be exactly: CAN-26693 (Tableau); CAN-26699 (JavaScript); CAN-26622 (JavaScript); CAN-26621 (Reconciliation); CAN-26579 (Accounting). Above budget: CAN-26567, CAN-26577, CAN-26579, CAN-26662. Applying the rubric exactly gives 7 Advance, 8 Hold and 1 Decline. Paste the check and list any row where the Gem differs - then ask the Gem about its evidence.

PROMPT / CHECK — copy and adapt

```
CHECK:
Above budget =SUMPRODUCT(--(Finalists!F2:F17>Finalists!G2:G17))

GEM:
For each recommendation, which pieces of information did you use? Did you use anything other
than skills, experience, interview score, salary and notice period?
```

Step 7. Record the human decision - the Gem only recommends. Apply the action, then choose a decision for the Data Analyst rows yourself.

PROMPT / CHECK — copy and adapt

```
ACTION:
Add a column called Hiring_Manager_Decision at the end of the Data Analyst table on the
Gem_Screening tab, with a dropdown of Advance, Hold and Decline.
```

Step 8. Prompt_Log already lists every prompt in this lab with its step. Ask Gemini to recap the conversation, copy each line into What Gemini did, add How I verified in your own words, and choose Keep, Revise or Undo in the Decision dropdown. Google Sheets saves automatically. Tip: the side-panel history is lost when you reload the page, so insert or copy anything you want to keep.

PROMPT / CHECK — copy and adapt

```
LOG:
List the prompts I sent you in this conversation. For each one, give a one-line summary of
what you did, so I can copy it into the Prompt_Log tab.
```

Sample Prompts

Use the app labelled for each prompt - Google Sheets or the Gemini app (or adapt it). Name the tab and columns, state the output, and always verify the result. The same prompts are in sample-prompts.txt in this lab folder.

Copy-ready prompts online: https://tertiarycourses.github.io/C817-Gemini-for-Google-Sheet/prompts/#lab-11

#	Purpose	Prompt
1	Gem	Write three interview questions for the weakest rubric area of each Advance candidate.
2	Gem	Rank the Software Engineer finalists by Total and explain the ranking in one sentence each.

#	Purpose	Prompt
3	Gem	Draft a polite email to a candidate you recommend we Decline, without giving scores.
4	Gemini app	Improve my Gem instructions so the Reason column always quotes the evidence.
5	Side panel	What are the main points of OrchidBay_Screening_Rubric?

Test It

Check	Expected result
Gem	Saved as 'Orchid Bay Candidate Screener' with instructions and both knowledge files.
Test candidate	CAN-26693: gap Tableau; 12/20; Hold.
Must-have gaps	CAN-26693 (Tableau); CAN-26699 (JavaScript); CAN-26622 (JavaScript); CAN-26621 (Reconciliation); CAN-26579 (Accounting).
Salary check	Above-budget formula = 4 (CAN-26567, CAN-26577, CAN-26579, CAN-26662).
Decisions	Rubric applied exactly: 7 Advance / 8 Hold / 1 Decline; Hiring_Manager_Decision dropdown added and filled by you.

Checkpoint

Lab 12 uses the same 16 finalists to choose the hires within the client's budget.

Troubleshooting

If this happens	Fix
The Gem isn't listed in the Sheets side panel.	Reload the sheet. If Gems are not available in the side panel on your account, use the Gem at gemini.google.com and paste only the screening columns - Candidate_ID and C1:L17, never Full_Name - into the chat.
The Gem can't find the rubric.	Check that both files were added under Knowledge and are Google Docs you can open.
The scores don't follow the rubric.	Add to the instructions: 'Show the evidence for each criterion score before the total.' Test again.
The Gem mentions a candidate's background or school.	That breaks the fair-screening rules. Strengthen the Context section and report it with the thumbs-down.

Challenge

Create a second Gem, 'Orchid Bay Interview Planner', that turns a Gem_Screening row into a 30-minute structured interview plan.

Reflection

What makes a Gem more consistent than typing the same long prompt each time - and what does it not fix?
